Components

F-MARK2 Automatic Sheet Feeder

Camera

Quickly detects 2-point reference marks for aligning the contour & printed images.

Auto Sheet Feeder Unit

An arm with air suction cups lifts the media from the supply tray and places it into the cutter.

Exit Tray

After cutting is completed, sheets are ejected in the tray.
*It is required to periodically remove sheets from the tray.

iMark Plus Digital Cutting Software (Windows)

Dedicated software controls the auto sheet feeding system and transfers contour cutting data to the plotter.

The system includes dedicated application software. After media is loaded, the attached camera quickly detects 2-point reference marks and corrects alignment before contour cutting data is transferred, giving you the perfect cut every time.

The software configures cutting conditions such as number of copies, cutting force, cutting speed, offset, and number of paths, and it can import Adobe Illustrator or CorelDRAW EPS files as the contour data.

* Designs created with any version of Illustrator or CorelDRAW need to be saved or exported in the specified format.
